## **DETAILED ACTION**

### *Introduction*

1. Claim 1-29 of U.S. application 09/695,457 filed on 10-24-2000 are presented for examination.

### ***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S. C. 121:
  - I. Claims 1-15 and 25-29, drawn to digital audio data processing system, classified in class 700, subclass 94.
  - II. Claims 16-24, drawn to spectral adjustment. The unwanted signal is either at least partially removed by processing a selected frequency band, such as by subtracting the contents of a particular frequency band from the input signal, or is overcome by preemphasis of a particular frequency or band to enhance the signal to noise ratio, classified in class 381, subclass 94.2.
3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as digital audio data processing/ spectral adjustment. See MPEP § 806.05(d).
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
